PREMIUM CLARIFIER DRIVES

Built to Last

The CM series of drives have been uniquely designed to allow for the best of the old and new; the CM series drive utilizes a EIMCO designed base and gear assembly from FLSmidth, a single input reducer with integral loadcell providing torque overload protection. The CM drives are supplied with a local NEMA 4X control panel containing a VFD for speed control and the torque display unit which allows for a digital feedback to the plants SCDA system.
